

## How to Experience KoraWay

Start by reading the landing page — it walks through the problem, the product, and the thinking behind it.

**Student View** Click "Student View" on the landing page. You'll be logged in automatically as Aminata, a first-generation student from Senegal arriving at Northeastern. From the dashboard, browse your AI-matched host families and request Oumar — your #1 match. Once requested, click "Simulate Host Accept" to trigger the full arrival experience. You'll see AI generate a personalized 4-week arrival plan in real time. From there explore the plan, leave a comment on a task, message Oumar, and try Ask AI with a question about arriving in Boston. When done, go to My Profile and click Reset Demo to clear the session.

**Host View** Go back to the landing page and click "Host View." You'll be logged in as Oumar. From the dashboard you'll see Aminata's request waiting — review her profile and needs, then accept her. Watch AI build her arrival plan. You can comment on plan tasks, message Aminata directly, log sessions in My Activity, and use Ask AI to get advice on how to prepare for her specifically. Reset Demo from My Profile when done.

**Note:** The student and host views share the same browser session — for the best experience run them one at a time and reset between each.
